

CS Challenge

Shortest path with extras

By: lau b 07/30/2020

TO DO

— Find the best path

Read a .txt file as input, convert it into a \binary file

Process several requests at one time (parallelism)
and check other routes

Don't forget to check the current traffic!

Understand the problem

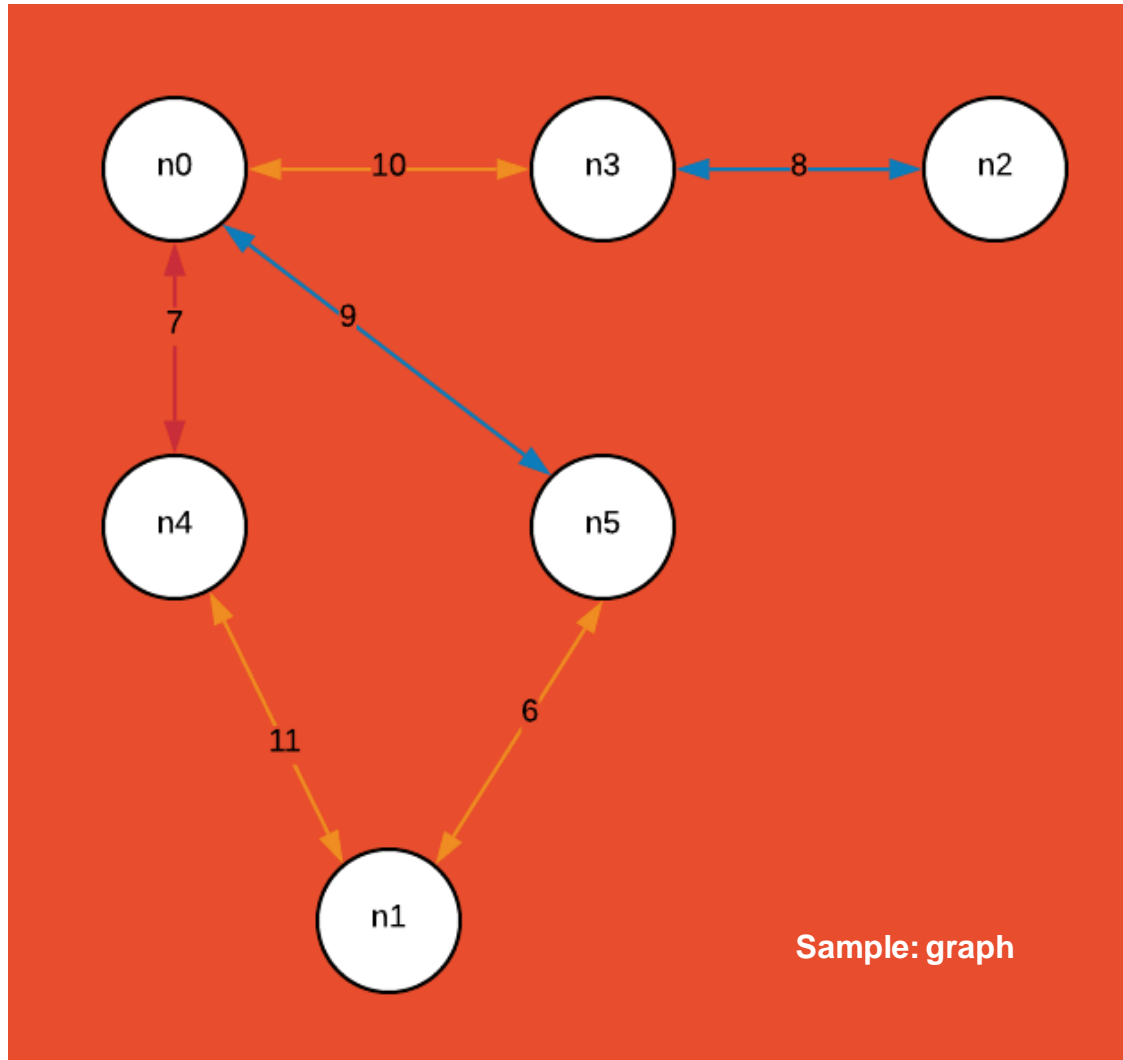

Okay,
but how?

Research for the best
practices

Well, code it

Please enter the start point:

>>n0

Please enter the destination:

>>n1

Best route:

>>[n0, n5, n1]

Enter how many routes you want to check: 1

Please enter the origin: n0

Please enter the destination: n1

--- Process 1412 ---

Time: 0.0024559497833251953 s

[['n0', 'n5', 'n1']]
